

WIRELESS TARGET HELPED IoTARGETING TO DEVELOP A NEW RANGE OF SMART GAMES

System Level Solutions provided a reusable electronics target with wireless connectivity and application control for airsoft guns and target based games of IoTargeting

Industry

Sports

Challenges

Frequent requirement for changing paper target in airsoft gun

Solution

Reusable electronic target with wireless connectivity, application control and replaceable silicon cover

Technical details

- Hardware engineering
- Nebulae, an IoT based architecture to integrate entire requirements of Wireless cloud connectivity
- Mechanical Design including replaceable silicon cover
- Packaging & Labelling
- Android & IOS App Controlled
- Wireless Smart Targets
- Cloud & Event for Multi-Sport Applications
- Connect Up to 20 Targets Simultaneously
- Lightweight & Robust Design
- Day Time LEDs for High Visibility
- 20 Hour AA Battery Life
- Power Saving Sleep Mode

Outcome

A new product range with innovative and smart features

Summary

IoTARGETING was looking for an electronic target to replace the paper based targets used in Airsoft guns to make the gaming experience more interactive and smart. SLS provided an innovative IoT based solution which helped IoTARGETING to introduce a new range of sports products and to enhance your skills and prepare you for advancement in your chosen sport.

Client Profile

IoTARGETING seeks to enhance the world of sports and revolutionize the future of global competition through the use of targeting technology and training systems. All of its technologies have been developed from the ground up, with several patents already established and still more pending. These ground breaking technologies extend far into many other applications beyond that of target based systems.

Its premier product is a new, innovative, smart targeting system meant to enhance targeting and touch based activities with mountable, wireless devices that connect to a globally competitive social network. Through the use of a Smartphone app, this system also offers a variety of game modes and challenges for fun and skill development.

Business Challenge

IoTargeting used to deploy paper-based targets for their airsoft gun products. Although paper-based targets were cheap but those need to be replaced quite frequently. Therefore, IoTargeting decided to replace paper-based target by re-usable electronic target with wireless connectivity and application control.

The Solution

IoTargeting selected SLS as a one stop solution provider for its turnkey project management capacity. Moreover, the expertise of SLS in the field of wireless technology domain and availability of its predefined ready solutions like Nebulae and Yalgaar.

Here Nebulae is an IoT architecture providing end to end wireless connectivity in both online and offline mode and forms Mesh Network amongst all the Smart Targets and Master Targets. Nebulae network is a self-healing network with OTA support for firmware updates in real time. On the other hand, Yalgaar is a cloud portal support which is used to store user and device registration data.

SLS also proposed its pre-defined hardware engineering solution along with Nebulae based architecture and Yalgaar to integrate entire requirements of wireless cloud connectivity, SLS has created battery powered electronic target with RGB LEDs visual indication which can be re-used multiple times. This solution is based on re-usable target technology with replaceable silicon front cover with high speed Air-soft Gun. Thus, it helped the client to invent a totally new product range.

Outcome

The solution, offered by SLS, was extremely stable and robust in nature. It can work with more powerful high fps (up-to 430fps) Air-soft guns. SLS has also provided Aluminium Front cover for better product life cycle.

In this case, SLS acted as an Original Equipment Manufacturer (OEM) and developed the entire product in terms of electronics, hardware, software, mechanical components and items as well as packaging, labeling etc. and also taken care of compliance and LAB certification (CE-RED-FCC-IC) related requirements.

With the help of SLS solution, IoTargeting developed app controlled reactive targets featuring an advanced technology for tracking players' score. The wireless capabilities enable its systems to be portable for at home use as well as in facilities. IoTargeting advanced System is designed to enhance players' skills and prepare them for advancement in their chosen sport.

SLS solution helped IoTargeting Group to add a completely new range of solution. IoTargeting Group has introduced a new website (<http://iotargeting.com/shop/>) for selling this new product. The client is satisfied with product performance as well as on-time constructive support from SLS.
